

Software Testing Assignment

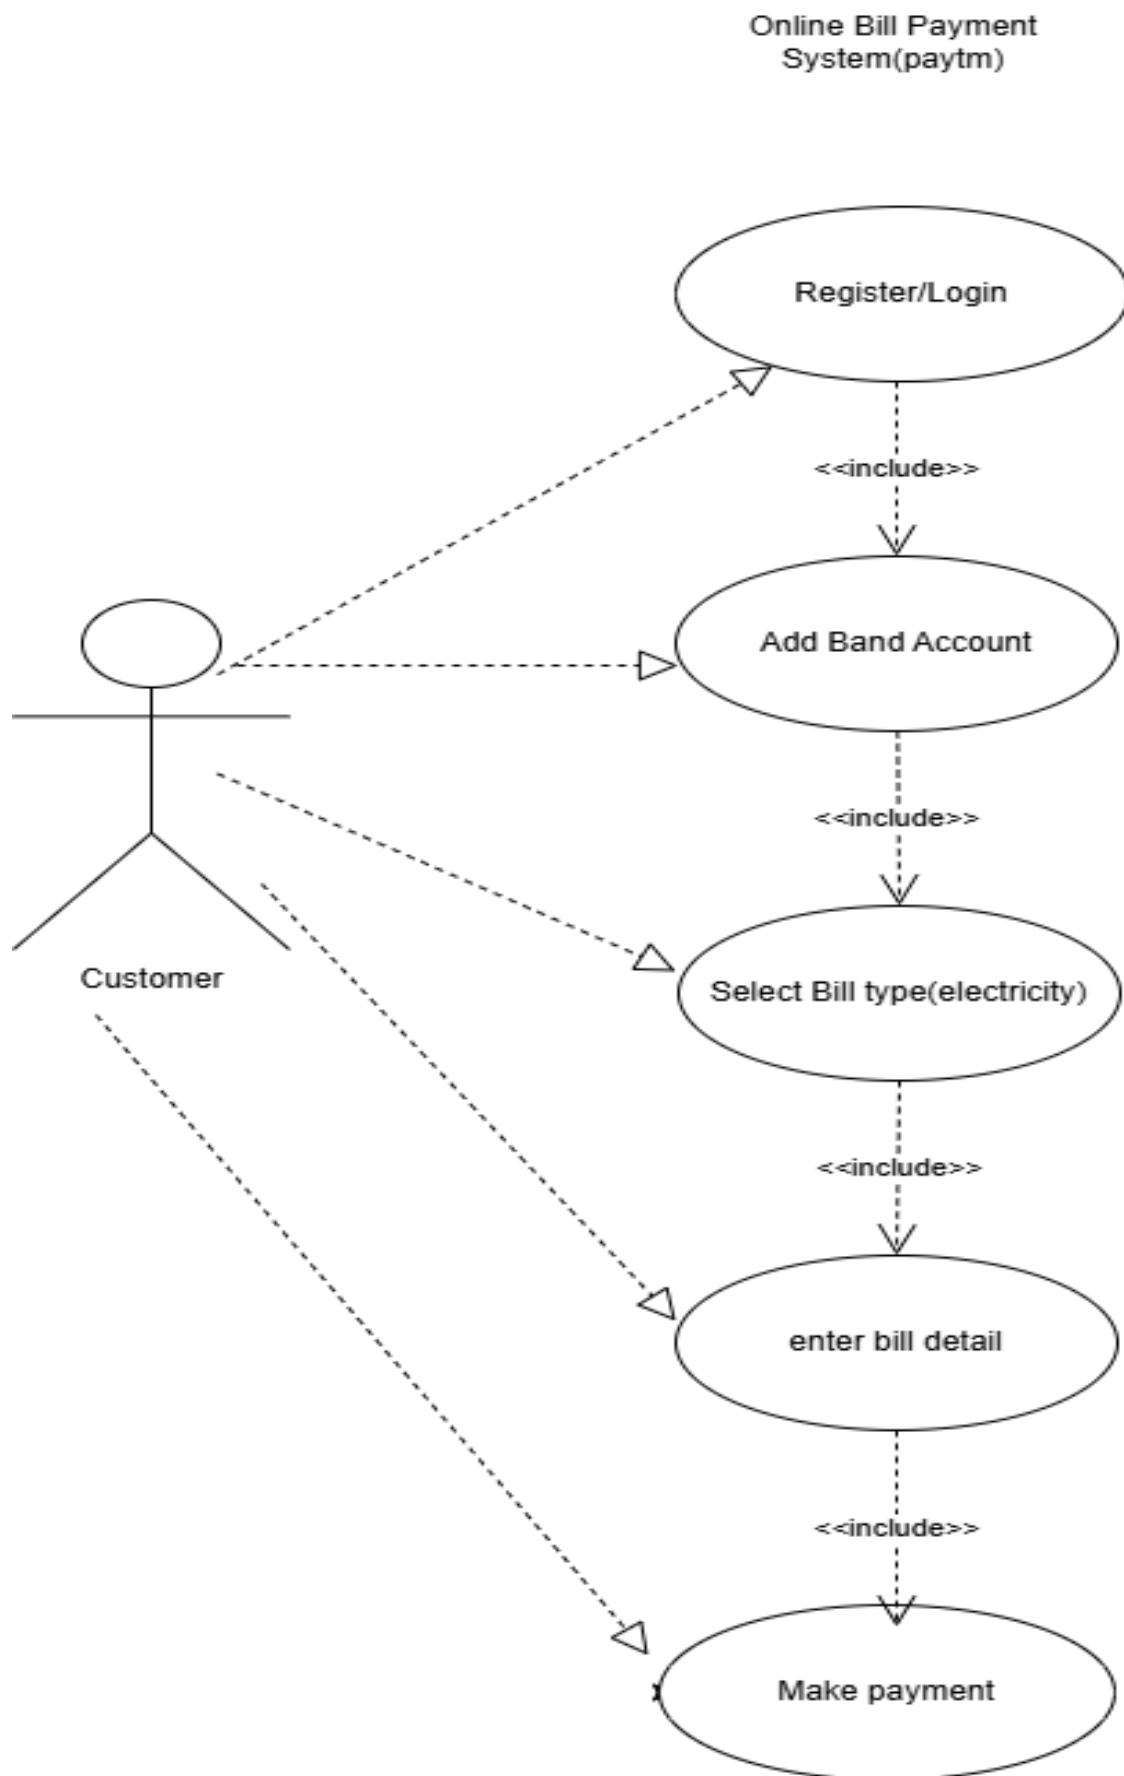

Module-1(Fundamental)

- What is SDLC
 - SDLC is series of steps/phases to provide model for development.
- What is software testing?
 - Software testing is process used to identify the correctness, completeness, and quality of developed computer software.
- What is agile methodology?
 - Agile means delivering a working software in small parts with continue feedback and improvement.
- What is SRS
 - SRS (Software Requirement Specification) is a document that clearly describes what the software should do.
- What is oops
 - Way to write a code, less code redudancy, Reusability, and Secure.
- Write Basic Concepts of oops
 - Object, Class, Encapsulation, Inheritance, Polymorphism, Abstraction.
- What is object
 - Object gives permission to access functionality of class.
- What is class
 - It is a collection of data member and member function
- What is encapsulation
 - Wrapping of data.
- What is inheritance
 - To derive attribute of some other class.
- What is polymorphism
 - One name many forms.

- Draw Usecase on Online book shopping

- Draw Usecase on online bill payment system (paytm)

- Write SDLC phases with basic introduction

- SDLC is a process to develop high-quality software. Its phases from planning to maintenance.
- Requirement gathering and Analysis
- Design
- Implementation(code)
- Testing
- Deployment
- maintenance

- Explain Phases of the waterfall model

- requirement collection
 - you have to collect what the user wants.
- Analysis
 - Model And Specify the requirements- “What”
- Design
 - Plan how the software look and work.
- Implementation
 - Write the code.
- Testing
 - Check the error and fix them.
- Maintenance
 - update and fix issues after release.

- Write phases of spiral model

- Planning
- Risk analysis
- Engineering (development & testing)
- Evaluation

- Write agile manifesto principles

- work divided into small parts.
- Daily meeting.
- Continuous improvement.
- Continuous testing and feedback.

- Explain working methodology of agile model and also write pros and cons.

- Requirement planning
- Iteration
- Design -> development -> testing
- Review & feedback
- Improvement

Pros

Quick delivery.

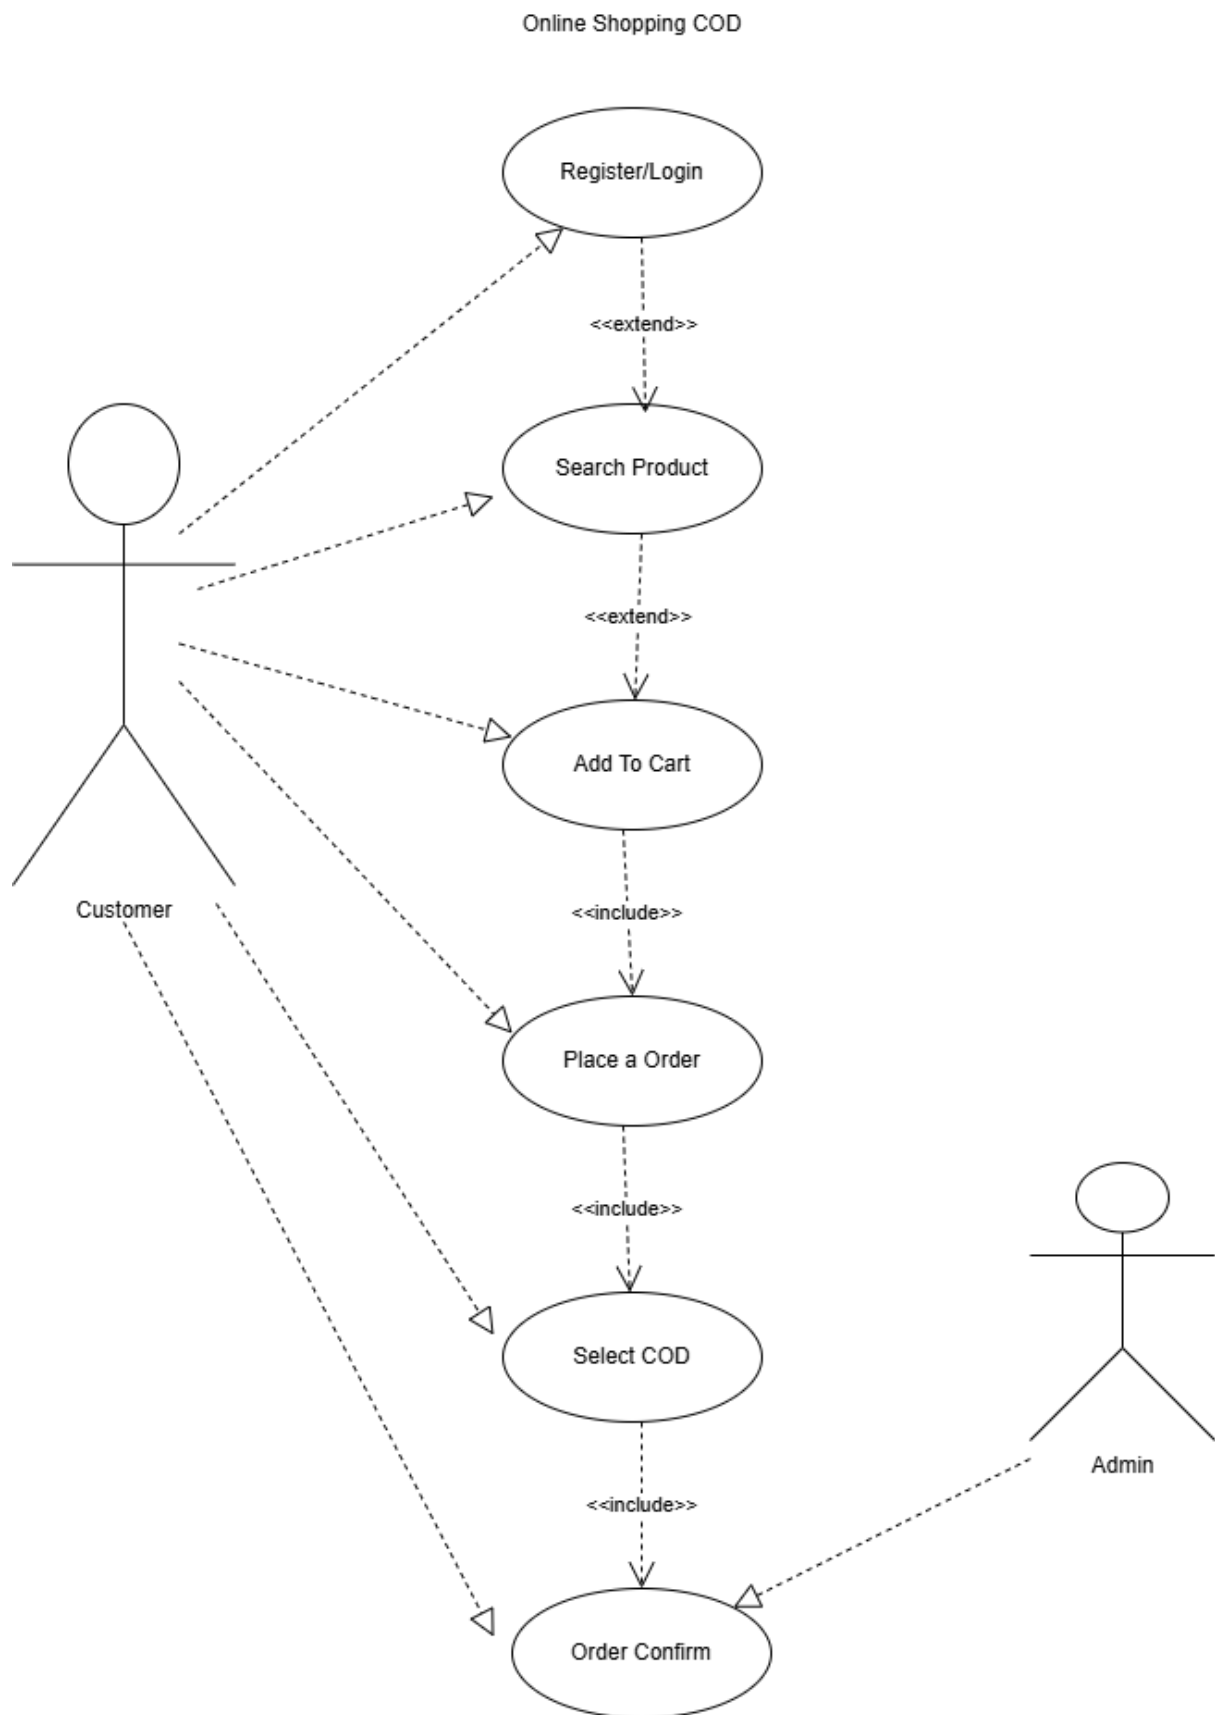

Easy to change requirement

Cons

Difficult to predict time and cost..

Not for large project.

- Draw usecase on Online shopping product using COD.

- Draw usecase on Online shopping product using payment gateway.

Online Shopping Product
using Payment Gateway
